

Unit B2, 39 Arrenway Drive
Albany, Auckland
New Zealand

Case Study: Application of Neptune Pacific Ltd OneCoat - NP OneCoat work was completed in May 2018.

This home is overlooking the beautiful Waitemata Harbour. There were 5 small roofs totalling approximately 200m². The roofs had an existing single layer mineral chip Torch On membrane that was approximately 18 years old. The roofs were showing signs of wear and need to be replaced, repaired or renewed. The owner was on board with us every step of the way confident in the system that we provided.

These are small sections of a couple of the roofs before the application of NP OneCoat

With the dry finish of 1.5m we were able to provide the property owner with a 15 year material warranty, and because this system is renewable it is able to be recoated.

As you can see from the pictures below outcome was great and the home owner was extremely happy with the result.

Before NP OneCoat application.

We gave the roof a high pressure wash and then proceeded to do all detail work and masking for the finish coat of Neptune Pacific Ltd OneCoat Grey, this was to be a finished dry film thickness of 1.5mm.

***The masking is complete,
the priming begins.***

After the application of NP OneCoat

Great result with very happy home owners.
